"UAS Kecerdasan Buatan"

Jumlah Pembelian

* Jika $X =$

• Total Pembelian ($X_{\text{total-buy}}$) = 70

• Frekuensi Pelanggan ($X_{\text{freq-cust}}$) = 8

|||||

$$\mu_{\text{Rendah}}[70] = \frac{\text{mid-buy} - x}{\text{mid-buy} - \text{min}} = \frac{50 - 70}{50 - 0} = \frac{-20}{50} = -0.4 = 0\%$$

$$\mu_{\text{Lumayan}}[70] = \frac{x - \text{min}}{\text{mid-buy} - \text{min}}, \text{ jika } x < \text{mid-buy}$$

$$\frac{\text{max} - x}{\text{max} - \text{mid-buy}}, \text{ jika } x > \text{mid-buy}$$

Karena, $x > \text{mid-buy}$, maka

$$= \frac{100 - 70}{100 - 50} = \frac{30}{50} = 0.6 //$$

$$\mu_{\text{Tinggi}}[70] = \frac{x - \text{mid-buy}}{\text{max} - \text{mid-buy}} = \frac{70 - 50}{100 - 50} = \frac{20}{50} = 0.4 //$$

Frekuensi Pelanggan

$$\mu_{\text{Jarak}}[8] = \frac{\text{Mid-Frek} - x}{\text{mid-frek} - \text{min}} = \frac{5 - 8}{5 - 0} = \frac{-3}{5} = -0.6 = 0 //$$

$$\mu_{\text{Kadang}}[8] = \frac{x - \text{min}}{\text{mid-frek} - \text{min}}, \text{ jika } x \leq \text{mid-frek}$$

$$\frac{\text{max} - x}{\text{max} - \text{mid-frek}}, \text{ jika } x \geq \text{mid-frek}$$

Karena $x = 8 \geq \text{mid-frek}$, maka

$$= \frac{10 - 8}{10 - 5} = \frac{2}{5} = 0.4$$

$$\mu_{\text{Sering}}[8] = \frac{x - \text{mid-frek}}{\text{max} - \text{mid-frek}} = \frac{8 - 5}{10 - 5} = \frac{3}{5} = 0.6 //$$

Rule :

- (R1) Jika Pembelian Rendah dan Jarang membeli apakah Besar diskon
- (R2) Rendah, kadang \Rightarrow kecil
- (R3) Rendah, Sering \Rightarrow kecil
- (R4) Lumayan, Jarang \Rightarrow Besar
- (R5) Lumayan, kadang \Rightarrow kecil
- (R6) Lumayan, Sering \Rightarrow kecil
- (R7) Tinggi, Jarang \Rightarrow Besar
- (R8) Tinggi, kadang \Rightarrow Besar
- (R9) Tinggi, Sering \Rightarrow kecil

diketahui

Jumlah Pembelian

$$N_{rendah} = 0$$

$$N_{lumayan} = 0.6$$

$$N_{tinggi} = 0.4$$

* Frekuensi

$$N_{jarang} = 0 \quad N_{sering} = 0.6$$

$$N_{kadang} = 0.4$$

$$\begin{aligned} (R1) \quad \alpha - \text{Predikat} &= \min(N_{rendah}[70] \cap N_{jarang}[8]) \\ &= \min(0, 0) \\ &= 0 \Rightarrow \text{diskon} = 0 \end{aligned}$$

$$\begin{aligned} (R2) &= \min(N_{rendah}[70] \cap N_{kadang}[8]) \\ &= \min(0, 0.4) \\ &= 0 \Rightarrow \text{diskon} = 0 \end{aligned}$$

$$\begin{aligned} (R3) &= \min(N_{rendah}[70] \cap N_{sering}[8]) \\ &= \min(0, 0.6) \\ &= 0 \Rightarrow \text{diskon} = 0 \end{aligned}$$

$$\begin{aligned} (R4) &= \min(N_{lumayan}[70] \cap N_{jarang}[8]) \\ &= \min(0.6, 0) \\ &= 0 \Rightarrow \text{diskon} = 0 \end{aligned}$$

$$(R5) = \min(\mu_{\text{umayan}}[70] \cap \mu_{\text{kadang}}[8])$$

$$= \min(0.6, 0.4)$$

$$= 0.4$$

$$\text{~~max~~ = max} - 0.4 \times (\text{max} - \text{min})$$

$$= 50 - 0.4 \times 50$$

$$= 30 \text{ // (kecil)}$$

$$(R6) = \min(\mu_{\text{umayan}}[70] \cap \mu_{\text{sering}}[8])$$

$$= \min(0.6, 0.6)$$

$$= 0.6$$

$$= 50 - 0.6 \times (50 - 0)$$

$$= 20 \text{ // (kecil)}$$

$$(R7) = \min(\mu_{\text{Tinggi}}[70] \cap \mu_{\text{dasar}}[8])$$

$$= \min(0.4, 0)$$

$$= 0 \text{ //}$$

$$(R8) = \min(\mu_{\text{Tinggi}}[70] \cap \mu_{\text{kadang}}[8])$$

$$= \min(0.4, 0.4)$$

$$= 0.4$$

$$\Rightarrow 0 + 0.4 \times (50 - 0) = 20$$

$$= 20 \text{ // (besar)}$$

$$(R9) = \min(\mu_{\text{tinggi}}[70] \cap \mu_{\text{sering}}[8])$$

$$\text{~~max~~ = min}(0.4, 0.6)$$

$$= 0.4$$

$$= 20 \text{ // (kecil)}$$

$$\text{Fuzzy_real} = (0.4 \times 30) + (0.6 \times 20) + (0.4 \times 20) + (0.4 \times 30)$$

$$= 12 + 12 + 8 + 12$$

$$= 44$$

$$\text{Fuzzy} = 0.4 + 0.6 + 0.4 + 0.4 =$$

$$= 1.8$$

$$z = \frac{\text{Fuzzy_real}}{\text{Fuzzy}}$$

$$= \frac{44}{1.8}$$

$$\approx 24.44\%$$

* Jadi, diskon yang didapatkan oleh pembeli adalah 24.44%
